

What type of filtering to choose?

Usage

You may configure system to detect SPAM messages and those infected by viruses. thanks to this function those emails will be marked:

- in the subject of the message there will be SPAM ALERT or VIRUS ALERT or both.
- you may also configure the rules so that those messages were deleted or sent to another email account

How to activate a filter on the server?

Log into Manager.

And then choose "Emails" , and then "Antispam & Antivirus"

Type of protection:

- simple (Antispam)
- full (Antispam & Antivirus)

Managing filters

Log into Manager. Go to "Emails" section, then choose "POP accounts" , "Filters" and "Create" .

To add rules, you need to:

- provide the name
- provide the rule

If you want to add more filters, you need:

- indicate an action to do
- indicate where to send emails

Attention: In case of Spam or virus you cannot send email back to sender.

Possible configurations:
