

Configuration POP3/IMAP Email

General

You'll find below the parameters for your OVH email accounts,

- –Name of the incoming server: **pop3.yourdomain.com** or directly, our server name: ns0.ovh.net
- –Port of the incoming server: **110**

- –Name of the outgoing server: **smtp.yourdomain.com** or directly, our server name: ns0.ovh.net
- –Port of the outgoing server: **587** (instead of port 25 because this port is filtered by many ISP)

- –Username/account ID: identical to the email address (e.g.: postmaster@domain.com)
- –Password: your password for your account, as defined in the creation of the email address

- You must also check "**outgoing server/SMTP requires authentication**" (no SSL or encrypted) using the same settings as for POP/incoming server.

If you want to use the secure server, you must indicate incoming and outgoing server "ssl0.ovh.net" | POP port 995 | SMTP port 465

By checking for the two (incoming and outgoing) server, the option that requires an SSL secure connection.

Tutorial

iPhone configuration **Windows Mail** configuration **Outlook 2007** configuration **Outlook** configuration **Outlook Express** configuration **Thunderbird** configuration **Mail** configuration for Mac **Entourage** configuration

- iPhone email configuration: **iPhone** configuration
- Windows Mail email configuration: **Windows Mail** configuration
- Outlook 2007 email configuration: **Outlook 2007** configuration
- Outlook email configuration: **Outlook** configuration
