

How to access my website via SSL/https?

Access via https is possible only for Plan packages and for the domain directly assigned to this hosting service.

This option is not available for domains assigned to the hosting in Multidomain option. Also, you cannot install SSL certificate as it's common to all hosting accounts.

Note: This option is available only for PLAN.

Access via domain

You may access your website via https:

Example: <https://www.yourdomain.com>

This type of access requires verification of certificate by your browser. The SSL certificate is not installed for your domain but for the server of your hosting service.

Quick access via url

If you don't want to go through above system of verification, you may use another URL to access your website via https:

Address: <https://ssl2.ovh.net/~LoginFTP>

SSL number depends on the type of Plan you have:

cluster002 : <https://ssl2.ovh.net/~LoginFTP>
cluster003 : <https://ssl3.ovh.net/~LoginFTP>
cluster004 : <https://ssl4.ovh.net/~LoginFTP>
cluster005 : <https://ssl5.ovh.net/~LoginFTP>
cluster006 : <https://ssl6.ovh.net/~LoginFTP>
cluster007 : <https://ssl7.ovh.net/~LoginFTP>
cluster008 : <https://ssl8.ovh.net/~LoginFTP>
cluster009 : <https://ssl9.ovh.net/~LoginFTP>
cluster010 : <https://ssl10.ovh.net/~LoginFTP>
cluster011 : <https://ssl11.ovh.net/~LoginFTP>
cluster012 : <https://ssl12.ovh.net/~LoginFTP>
cluster013 : <https://ssl13.ovh.net/~LoginFTP>
cluster014 : <https://ssl14.ovh.net/~LoginFTP>
cluster015 : <https://ssl15.ovh.net/~LoginFTP>

Redirection via .htaccess

You may redirect your domain to https in the .htaccess file:

```
RewriteEngine on  
RewriteCond %[HTTP_HOST] ^domaine.com$
```

OVH

```
RewriteCond %[HTTP_HOST] ^www.domaine.com$  
RewriteRule ^(.*) https://www.domaine.com/$1 [QSA,L,R=301]
```
